

SHIVAM DWIVEDI

MERN Stack Developer

shivamd Dwivedi2442@gmail.com | +91 97951 61798 | [LinkedIn](#) | [GitHub](#)

SUMMARY

Full-stack developer specializing in the MERN stack, building production-grade web applications end-to-end — from database schema design and REST API architecture to deployment. Experienced in delivering multi-role platforms, automation tooling, and AI-integrated systems. Seeking a MERN internship to contribute in a collaborative engineering team.

EXPERIENCE

Frontend Developer Intern — She Can Foundation

Present

- Build and maintain responsive, accessible UI features for a production web application using React and JavaScript.
- Collaborate with cross-functional team members to integrate REST APIs and ship production-style frontend workflows.

PROJECTS

SwiftCart — Multi-Portal E-Commerce Ecosystem | [Live Demo](#) | [GitHub Repo](#)

- Architected a RESTful API and unified MongoDB schema across 3 concurrent user roles (Customer, Seller, Delivery), enabling real-time order sync with sub-1-second dashboard updates.
- Automated the full seller order lifecycle from inventory tracking to fulfillment, cutting manual status updates through event-driven catalog logic.
- Secured all three portals with JWT authentication and role-based middleware, eliminating cross-role data leakage in testing.
- Shipped to production at under 2-second page loads by optimizing React state management and API efficiency; version-controlled via Git/GitHub.

Tech Stack: React.js, Node.js, Express.js, MongoDB, Tailwind CSS, JWT, Vercel

Telegram Quiz Bot — Multi-Tenant Quiz Automation SaaS | [Live Demo](#) | [GitHub Repo](#)

- Built a multi-tenant platform letting users connect their own Telegram bot and auto-run scheduled quiz polls across groups and channels, solving a real classroom need for a mentor running daily student quizzes.
- Integrated Google Gemini AI to auto-extract MCQs from uploaded images and PDFs, cutting manual quiz-creation time through structured JSON validation and automatic retry handling.
- Engineered a cron-based scheduler supporting one-time, recurring, and bulk question-bank polls with broadcast delivery to multiple groups from a single dashboard.
- Designed a MongoDB-backed analytics layer tracking per-student correctness with day-wise and weekly breakdowns, adapting the UI to Telegram platform constraints such as disabling per-user tracking for anonymous channel polls.

Tech Stack: Next.js, React.js, Node.js, Express.js, MongoDB, Telegraf, Google Gemini API, JWT

SKILLS

Frontend: React.js, Next.js, HTML5, CSS3, JavaScript (ES6+), Tailwind CSS, Responsive Design

Backend: Express.js, REST API Design, JWT Authentication, Middleware

Database: MongoDB, Database Design

Tools & Platforms: Git, GitHub, Docker, Redis, VS Code, Postman, Vercel, Render, MongoDB Atlas

Other: Problem Solving, Deployment

EDUCATION

Bachelor of Science in Computer Science

Expected 2029

K.P. Uchha Shiksha Sansthan, Jhalwa, Prayagraj, Uttar Pradesh
